

PART A — Research Questions (Short Answers)

1. What new improvements were introduced in Gemini 3.0?

Gemini 3 Pro Preview is our most powerful agentic and coding model. It features a 1M token context window with the best multimodal understanding capabilities.

Gemini 3.0 is introduced with features like:

Thinking mode: Introducing Thinking levels instead of thinking budget.

Multimodal function response: you can include multimodal content in the function response parts that you send to the model.

Streaming function call arguments: you can request that function call arguments be streamed as they are generated by the model.

2. How does Gemini 3.0 improve coding & automation workflows?

Gemini 3.0 introduces "Vibe Coding," a capability where developers can build fully interactive applications using only natural language.

3. How does Gemini 3.0 improve multimodal understanding?

Gemini 3.0 is described as the world's best model for native multimodal understanding, capable of processing text, images, audio, video, and code simultaneously with high fidelity.

4. Name any two developer tools introduced with Gemini 3.0.

- Google Antigravity: A new agentic development platform (IDE) that allows developers to collaborate with AI agents that can autonomously code, run terminal commands, and browse the web.
- Gemini CLI: A command-line interface tool that enables developers to integrate Gemini 3.0's reasoning and automation capabilities directly into

their terminal workflows.

PART B — Practical Task (Screenshot Required)

Task:

You must complete the following steps:

Update the Gemini 3.0 model

Using the `/model` command in Gemini CLI, update the Gemini model to the latest version(3.0).

Note: You do not need to update the CLI itself; only the model should be updated.

```
Update successful! The new version will be used on your next run.
> /model

Select Model

Gemini 3 is now enabled.
To disable Gemini 3, disable "Preview features" in /settings.
Learn more at https://goo.gle/enable-preview-features

When you select Auto or Pro, Gemini CLI will attempt to use gemini-3-pro-preview first, before falling back to gemini-2.5-pro.

1. Auto
   Let the system choose the best model for your task.
2. Pro (gemini-3-pro-preview, gemini-2.5-pro)
   For complex tasks that require deep reasoning and creativity
3. Flash (gemini-2.5-flash)
   For tasks that need a balance of speed and reasoning
4. Flash-Lite (gemini-2.5-flash-lite)
   For simple tasks that need to be done quickly

To use a specific Gemini model on startup, use the --model flag.
