

What does AI-Driven Development mean to you?

AI-Driven Development as it sounds in the name "AI-Driven" is the type of development which involves Artificial intelligence or LLM (Large Language Model) as the core of the development. Instead of a coder just writing code it can help the coder with its assistance and can code for him and can help him bring ideas to life as fast as possible with AI assistance the developer can write code with ease and faster with it

How do you see the future of Human–AI Collaboration in software development?

The future depends how the human adapt to the AI collaboration with them if the human quickly learns and adapts the new coming AI technology it can certainly help him create something productive he alone can't create or have problem creating. With AI latest technology a human who doesn't even know how to write code can create Amazing software with AI assistant all they have to know how to built it. Adapting the new AI era can be challenging if you are seeing it as your competitor but you have to change your mindset instead of seeing him as your competitor see it as your partner that can help you build very interesting things if only you give him a chance. We are already using AI in our life and has change very much today compare to past in the past it was used as a conversational bot to have questions answer sessions with him but today it can used as tool for you whether it is web searching creating programs with scratch or doing coding task all you can do it with AI so i will say in the end that human have to adapt this technology as not only works seamlessly but can help you and can do various task for you
